

My Homework

Name: Faizullah Danish

Teacher: Ghani Hussaini

Rectangle Area Program:

```
1 declare
2 len number;
3 wid number;
4 area number;
5 begin
6 len :=&length;
7 wid :=&width;
8 area :=len*wid;
9 dbms_output.put_line('Rectengle Area =' || area);
10* end;
```

SQL> /

Enter value for length: 10

Enter value for width: 20

Rectengle Area =200

PL/SQL procedure successfully completed.

SQL>

Square Area Program:

```
1 declare
2 side number;
3 area number;
4 begin
5 side :=&Side;
6 area :=side*side;
7 dbms_output.put_line('Square Area =' || area);
8* end;
9 /
```

Enter value for side: 10

Square Area =100

PL/SQL procedure successfully completed.

Average of three numbers:

```
1 declare
2 a number;
3 b number;
4 c number;
5 avg number;
6 begin
7 a :=&firstnumber;
8 b :=&secondnumber;
9 c :=&thirdnumber;
10 avg :=(a+b+c)/3;
```

```
11 dbms_output.put_line('Average =' || avg);
```

```
12* end;
```

```
SQL> /
```

Enter value for firstnumber: 4

Enter value for secondnumber: 6

Enter value for thirdnumber: 8

Largest Number among three:

```
1 declare
```

```
2 a number;
```

```
3 b number;
```

```
4 c number;
```

```
5 largest number;
```

```
6 begin
```

```
7 largest :=a;
```

```
8 if b>largest then
```

```
9 largest :=b;
```

```
10 endif;
```

```
11 if c>largest then
```

```
12 largest :=c;
```

```
13 endif;
```

```
14 dbms_output.put_line('largest number is =' || largest);
```

```
15* end;
```

```
SQL> /
```

Smallest number:

```
1 declare
2 a number;
3 b number;
4 c number;
5 smalest number;
6 begin
7 smalest :=a;
8 if b<smalest then
9 smalest :=b;
10 endif;
11 if c<smalest then
12 smalest :=c;
13 endif;
14 dbms_output.put_line('Smalest number is ' || smalest);
15* end;
SQL> /
```

Grade of student:

```
declare
marks number;
grade varchar2(1);
begin

marks :=&marks;
elseif >= 90 then
grade := 'A';
elseif marks >= 80 then
```

```

grade := 'B';
elsif marks >= 70 then
grade := 'C';
elsif marks >= 60 then
grade := 'D';
else
grade := 'F';
endif;
dbms_output.put_line ('Grade is = ' || grade);
end;
/

```

Celsius conversion to Fahrenheit :

```

declare
C number;
f number;
begin

C :=&Celcius;
f:= (c * 9/5) + 32;
dbms_output.put_line ('Fahrenheit is = ' || f);
end;
/

```

Simple calculator:

```

declare
a number := 20;
b number := 10;
result number;
begin
result := a + b;
dbms_output.put_line('Addition is = ' || result);

result := a - b;
dbms_output.put_line ('Subtraction is = ' || result);

```

```
result := a * b;  
dbms_output.put_line ('Multiplication iss= ' || result);
```

```
result := a / b;  
dbms_output.put_line ('Division = is' || result);  
end;  
/
```

Electricity bill program:

```
declare  
units number := 250;  
bill number := 0;  
begin  
if units <= 100 then  
bill := units * 2;  
elsif units <= 200 then  
bill := (100 * 2) + ((units - 100) * 3);  
else  
bill := (100 * 2) + (100 * 3) + ((units - 200) * 5);  
endif;  
  
dbms_output.put_line ('Electricity bill is = ' || bill);  
end;  
/
```

Factorial of numbers:

```
declare  
num number:= 5;  
fact number := 1;  
i number := 1;  
begin  
while i <= num loop  
fact := fact * i;  
i := i + 1;  
end loop;  
  
dbms_output.put_line('Factorial = ' || fact);  
end;  
/
```
